370-T-CM

BLIND STITCH
FOR BELT LOOP
WITH LOOP PRESS

Belt Loop Production

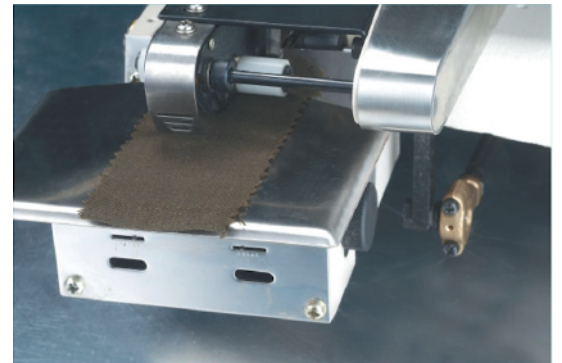

The machine is equipped with a knife group for the production of loops. The cutting width is manually adjustable.

Blind stitch does not leave traces of stitching on the front of the fabric. Used for stitching on quality trousers.

Belt loop press

The device allows you to iron the newly produced loops by setting the temperature as desired. Furthermore, a reinforcement can also be inserted.

Display

This display allows you to adjust the temperature of the belt loop.
